

Abdominal Ultrasound

腹部彩超

Patient: Lei Zhu (Clark) · Male · DOB 1992-06-23 | Exam date: 2026-04-01 | Southwest Hospital Health Management Center, Chongqing | Check-up ID: 8002262907

Abdominal Ultrasound / 彩超 (肝胆胰脾+双肾+门静脉)

Findings / 检查所见

Liver: left lobe AP diameter 55 mm, right lobe oblique diameter 115 mm. Normal shape, smooth capsule, clear vascular markings, homogeneous parenchymal echogenicity, no far-field attenuation. Portal vein 10 mm with good flow filling; right-branch velocity 16 cm/s.

左肝前后径55mm, 右肝斜径115mm。肝切面形态正常, 包膜光整, 血管纹理显示清晰, 肝实质回声均质, 远场声衰减。门静脉内径10mm。门脉血流充盈好, 右支流速16cm/s。

Gallbladder: normal shape and size, thin uniform wall, clear lumen, no abnormal echo. Common bile duct 5 mm; no intrahepatic duct dilatation. **Pancreas:** normal, homogeneous echo, main duct not dilated. **Spleen:** thickness 28 mm, fine homogeneous echo, no abnormality.

胆囊切面形态大小正常, 壁薄均匀, 内部液区清晰, 腔内未见明显异常回声。胆总管内径5mm。肝内胆管无明显扩张。胰腺切面形态正常, 回声均匀, 主胰管不扩张。脾厚28mm, 回声细小均匀, 其内未见异常。

Both kidneys: normal shape and size, smooth capsule, homogeneous parenchyma, clear cortico-medullary differentiation, no stones / hydronephrosis / mass. CDFI: good renal blood flow in a tree-like distribution.

双肾形态大小正常, 包膜光整, 实质回声均匀, 内部结构层次清晰, 其内未见明显结石、积水、占位。CDFI: 双肾血流充盈好, 呈树型分布。

Impression / 印象

Liver, gallbladder, pancreas, spleen and both kidneys — no significant abnormality on ultrasound.

肝、胆、胰、脾、双肾超声未见明显异常。

Note: greyscale ultrasound did not flag fatty liver here, but the FibroScan CAP value (311 dB/m) indicates severe steatosis — see the Liver FibroScan report.
